

AnteAGE MDX® Exosome Solution

3 Treatments | Each Treatment Includes 10 Billion Exosomes and 5ml Diluent

A first of its kind, **AnteAGE MDX® Exosome Solution** is a highly concentrated exosome treatment for in-office procedures.

Exosome Solution comes in a lyophilized form to preserve the highest level of quality and purity. These lyophilized exosomes are to be reconstituted using the included Diluent Solution immediately prior to treatment.

RECONSTITUTION

Reconstitute the lyophilized Exosome vial with the Hyaluronic Acid Diluent solution provided.*

Fill the Exosome Solution vial with the diluent and close the lid; gently shake the mixture back and forth for about 10 seconds.

Topically apply the reconstituted MDX solution to the treatment area.

*You may use up to 5ml of HA, but for smaller treatment areas customize with less HA to Exosome ratio.

FEATURES AND BENEFITS

- 10 Billion pure exosomes per treatment for enhanced anti-aging and regenerative outcomes.
- Highly anti-inflammatory, reduces redness post treatment resulting in an overall faster recovery.
- 5 ml of Diluent for ample glide and coverage for entire treatment area.
- Enhance all office procedures.

KEY INGREDIENTS & FUNCTIONS

Hybrid Engineered Exosomes

Cocultured conjugate of bone marrow and Wharton's Jelly (BMSC and Umbilical) nanospheres filled with Growth Factors and Cytokines that help control inflammation and encourage healthy collagen growth by reversing the aging phenotype of the skin. They are part of a class of cell signals called Extracellular Vesicles (EVs).

Hyaluronic Acid

A humectant that attracts and holds moisture in skin cells for a rapid increase in hydration and volume.

Ingredients:

Exosome Vial: Phosphate buffered saline, Human Bone Marrow Exosomes, Human Umbilical Cord Exosomes, Trehalose

Diluent Vial: Water (Aqua), Hyaluronic Acid, Dehydroacetic Acid, Benzyl Alcohol
