

## Oncology Approved

AnteAGE MD® is formulated to be safe and healthy, even for those with compromised skin and immune systems. Our growth factor actives are tuned for anti-inflammatory response, which is understood to be anti-proliferative.

Oncology Spa Solutions® (OSS) is the preeminent US organization for reviewing and recommending aesthetic products to be used in conjunction with oncology treatments.

**The AnteAGE MD® products have been reviewed and approved by OSS.**

AnteAGE MD®, as an authority in aesthetic regenerative medicine, is an industry leader in the biochemistry of Stem Cells, Growth Factors and Cytokines. As a mission partner of OSS, AnteAGE MD plays an integral role in the education and success of the aesthetic professional treating cancer patients.

Our partnership with Oncology Spa Solutions is a natural synergy, with both sides focused on a greater understanding of compromised skin and the mechanisms behind supporting its ability to heal.

AnteAGE MD® is rooted in the most up-to-date research on inflammation and its link to cellular health and aging, and whether inflammation is a part of skin aging or disease.

## Pregnancy & Breastfeeding Approved

AnteAGE MD® products are formulated without toxic chemicals or acids which are a concern for new moms and moms-to-be.

Hydroquinone is the most important ingredient to avoid while pregnant. There is no Hydroquinone or ingredients which break down into Hydroquinone in the AnteAGE MD® products.

Salicylic Acid is an ingredient that some have raised concerns about, though there is no direct evidence of harm while pregnant or breastfeeding. Salicylic Acid is present in AnteAGE MD® Serum as part of a natural preservative system, in less than .01% concentration. When applied to skin at this level there is no measurable effect and is not absorbed systemically in levels that even conservative physicians would be concerned about.
