

AnteAGE MDX[®] Exosome Solution

PREP

2 weeks before an Exosome Treatment it is best to prep the skin by applying 1-2 pumps of Serum & Accelerator twice daily.

TIMELINE

In office Microneedling treatments should be performed 1x per month for 3-5 months. Ablative treatments should be scheduled per device protocol.

DURING TREATMENT

With a gloved hand, cleanse skin thoroughly.

Apply topical analgesic per protocol according to scheduled treatment.

Remove analgesic thoroughly with an alcohol solution.

If Microneedling, apply Exosome Solution to the skin, in sections, to use as a glide for the treatment.

For all treatments, finish by applying the Exosome Solution topically to entire treatment area.

IMMEDIATELY AFTER

For Microneedling, apply the remainder of the Solution to treated area. Give the patient AnteAGE Hyaluronic Acid to apply for the remainder of the day as needed for Hydration.

Do not apply anything else to the skin, including SPF for 24 hours.

POST CARE

24 hours post Microneedling, the client can begin using 1-2 pumps of AnteAGE MD Serum & Accelerator twice daily followed by an SPF.

7 days post Ablative treatments, the client can begin using 1-2 pumps of AnteAGE MD Serum & Accelerator twice daily followed by an SPF.

OTHER TREATMENTS

AnteAGE Exosomes can be combined with LED treatments.

Can be used with PRP treatments.

PRO TIP

Send patient home with the AnteAGE MD[®] Stem Cell Aftercare Kit. This will give them a 3-5 day sample of skincare and a coupon to drive them back to you.
